

HD Twin  
SAT receiver with  
alphanumeric LCD  
display

## TELESTAR TELETWIN HD

The compact TELESTAR TELETWIN HD is a very versatile HD SAT receiver. The HD twin tuner receives FTA TV and radio programs via DVB-S/S2 in best HD and SD quality. Since the receiver has a twin Tuner it is possible to record one program and parallel watch another program - transponder independently of satellites. The receiver has all the important connections including two USB-A connections and a LAN connection. The Bluetooth transmission function is also very noteworthy, via this feature you can send the sound via Bluetooth to a Bluetooth speaker/soundbar or

headphone. If the receiver is integrated into a network with internet access, it unfolds its full potential. The TELETWIN HD features internet radio, as well as a satellite IP server and satellite IP client. Lots of user-friendly features, like e.g. an intuitively navigable, multilingual user interface, electronic program guide, teletext, timer, as well as adjustable display brightness (via the menu in standby mode). To keep it short: if you are looking for a compact all-rounder, look no further than the TELESTAR TELETWIN HD.

### Highlights
