

SuperSignal shares the functionalist design philosophy and uncompromising quality ethos that is our hallmark, ensuring that it is truly a product without equal in the compact digital radio category.

SuperSignal is equipped to receive DAB/DAB+ broadcasts, as well as traditional FM with RDS. Bluetooth® support is also included, meaning users can wirelessly stream music from their iPhone, Samsung, Windows Phone, Blackberry or other Bluetooth enabled device, including laptops and tablets – with no physical docking necessary. SuperSignal includes sophisticated alarm clock functionality including dual alarms, Sleep and Touch-Snooze activated by simply touching the radio's aluminium grille.

SuperSignal's wooden cabinet is clad in a choice of furniture-grade American walnut veneer or premium quality matt paint finishes, while anodised aluminium and mild steel components provide a reassuringly tactile quality. A detailed graphical OLED display and joystick control add a touch of modernity, while patented audio electronics and BMR driver technology deliver 12W of clear digital audio with clarity and deep rich bass.
