

IMPERIAL® DABMAN i100

WiFi-capable internet and FM radio receiver in elegant wooden housing featuring media player application, large LC display, button panel and remote control.

Thousands of radio stations worldwide

The i100 is DigitalBOX's first radio that combines both FM and internet radio reception. The housing is kept in elegant wood design. Its high-gloss front hides cutting-edge technology that allows the „classical“ reception of FM radio channels as well as, thanks to the internal WiFi module, a wireless integration into a home network. Once connected, the i100 gives access to thousands of internet radio stations around the globe. Another feature is the media player option: different types of media files (e.g. MP3, WMA or AAC) that are accessible in the network may be played back via the i100. Other functions, such as alarm mode, channel memory or installation assistant top off the list of useful functions.
